

Noah

noah@matrixstudios.co | noahhardings@yahoo.com | github.com/iusepot

Software engineer and technical leader building backend systems, DevOps infrastructure, and live-service platforms across multiple organizations.

EDUCATION

High School Student

Diploma In Progress

Present

EXPERIENCE

Software Engineer & Chief Operating Officer

June 2026 – Present

Matrix Studios

Remote

- Direct day-to-day operations and engineering priorities as COO while contributing hands-on as a software engineer
- Design, build, and maintain core software systems and services powering the company's products
- Coordinate across engineering, operations, and business functions to align technical execution with company goals
- Company: matrixstudios.co | Contact: max@matrixstudios.co

Talent Acquisition, Software Engineer & DevOps/Infrastructure

July 2026 – Present

Lucnosity Tierlist

Remote

- Lead talent acquisition efforts to recruit and onboard engineering and operations team members
- Develop and maintain application features as a software engineer
- Manage DevOps and infrastructure, including deployment pipelines, server administration, and monitoring
- Contact/verification via Discord: discord.gg/luctierlist (reach the owner)

System Administrator

April 2026 – Present

Cloudexa

Remote

- Administer and maintain server infrastructure, ensuring uptime, security, and performance
- Monitor systems and troubleshoot issues across networked services and infrastructure
- Implement and manage backend services, databases, and containerized deployments
- Company: cloudexa-hosting.com | Contact: support@cloudexa-hosting.com

LEADERSHIP & ACTIVITIES

Technical Director & Programming Lead

FIRST Robotics Competition (FRC) Team

- Lead the team's technical direction and programming efforts, overseeing robot software architecture and implementation

PROJECTS

Alchemist | Kotlin, Paper API, MongoDB, MySQL, Redis

- Maintainer | github.com/iusepot/Alchemist
- Built a fast, cross-version Minecraft server rank/permissions core supporting ranks, punishments, friends, parties, staff utilities, and webhooks
- Used MongoDB/MySQL and Redis to sync data across multiple servers, designed to be easy to use while remaining powerful and flexible

Towny Bot | Paper API, Towny API, Discord

- Developer | github.com/iusepot/towny-bot
- Built a Minecraft Paper plugin that hooks into the Towny API to bring nation, town, and resident information into Discord
- Integrated the Towny Resources API to display a town's resources directly in Discord

TECHNICAL SKILLS

Languages: Kotlin, Java, JavaScript/TypeScript, Python, SQL, Bash

Databases: MongoDB, Redis, PostgreSQL

DevOps & Infrastructure: Kubernetes, Docker, Grafana, Prometheus, CI/CD, Linux, Nginx

Developer Tools: Git, GitHub Actions, IntelliJ IDEA, VS Code
